Welcome Remarks

Dear colleagues and friends,

The 10th Qianjiang international cardiovascular congress is going to be held in Hangzhou from September 22th to 25th 2016. On behalf of the organizing committee and the Zhejiang society of cardiology, I'm honored to invite you to participate in this meeting.

As one of the major leading causes of global morbidity and mortality, cardiovascular diseases have become the most active and promising researching field. With our previously successful experience, QICC2016 will deliver up-to-date achievements in current theory and technology, including preventive cardiology, general cardiology, interventional cardiology, basic research and cardiac rehabilitation. China valve, basic and translational medical forum co-organized by Chinese Academy of Sciences, structural heart disease forum, PCI optimization forum co-organized by TCTAP, complex PCI forum co-organized by CCT will be our featured sessions this year.

The theme of QICC is to propagate new discovery and guidelines in cardiovascular field, demonstrate the achievement we got last year, and promote the international and domestic academic exchange. With the help from oversea academic partners such as TSCI, Angioplasty Summit TCTAP, CCT, CSI, HKCC, and Singapore Cardiac Society, we will turn QICC2016 into an impressive international meeting.

Hangzhou is a highly civilized and ancient city rich in both historical sites and natural landscape, such as the West Lake and Grand Canal. The city is also an international metropolis with modern and efficient tourist systems. You can have the opportunity to enjoy the wonderful scenery after scientific activities. Look forward to seeing you in QICC2016 this summer.
